

POWER FEEDER SPACER & CRN BRACKET

Power Feeder Spacer

Power Feeder Spacers provide a constant spacing between the power feeder. The custom design of this product allows a six degree rotation on the power feeder bundle and doesn't fight against the natural flow of the cable. It is designed to sit within Omega Clamps used as anchor points.

CRN Bracket

The CRN Bracket is custom made to hold the "Current Return Network" in place inside a composite aircraft. Very easy to install with a bolt, the CRN system is fixed in place by hand with an integrated snap system on the bracket. The bracket is made of PEEK material, and silicone is compression overmolded onto the bracket.
